

A website to promote your new webshop (Focus: HTML & CSS)

You have decided to start an e-commerce company together with some of your classmates (pick a group of 4) in order to earn a little extra money selling something you find interesting. You have to design a webpage for your company that attracts new customers and describes the company's vision. You decide what the company sells (Posters with Memes? Solar cells? My little pony merchandise?).

The focus of this assignment is on CSS and HTML, so naturally this is THE ONLY things you will use to create the website.

- 1) Make a front page for webshop that introduces the purpose of the website.
 - a. Someone you know in the business drew a design sketch of an idea for layout of the front page; however, you are allowed to be creative. The sketch is included below.
 - b. The front page should have a navigation bar with links to the different content, and should at least contain links and webpages for the following:
 - i. A page showing products and product details (price, name, category?) in your company
 - ii. A page with products on sale
 - iii. An about page explaining the history of your company
 - iv. A page about gift cards for your shop
 - v. A contact page for the company showing the roles and titles of everyone in the company (YOU!) including pictures.
- 2) Use CSS to organize and style the content.
- 3) "Borrow" pictures from the internet or make/take your own (remember to optimize images for web).
- 4) Maybe you want to dazzle your users by including media (sound, video) on the website.
- 5) No in-line styling allowed (be professional).
- 6) No frameworks allowed.
- 7) No JavaScript allowed (yet) - only HTML and CSS.
- 8) Validate all files and correct errors before handing in.

Hand-in in one packed file (zip) on it's learning. Only one hand-in per group. Remember all group members name on the hand-in. Name your file the same as your group name.

Write whom (which pair) wrote which part of the code in HTML comments.

Have fun ☺
