

A website to promote your new webshop (Focus: Bootstrap and responsiveness)

Recreate the website from assignment 1, but this time use Bootstrap features to make it responsive. Remember what it means to make a webpage responsive. You should “start over” and not just load bootstrap on to the existing website.

- 1) Recreate the webpage from last time.
 - a. Someone you know in the business drew a design sketch of an idea for layout of the responsiveness of the webpage; however, you are allowed to be creative. The pictures are included below.
 - b. Control layout using Bootstrap's Grid Layout feature.
 - c. Use Bootstrap's collapsible Navigation Bar feature for the navigation bar.
 - d. Use Bootstrap's Carousel feature for the sliding images.
 - e. Apply additional responsiveness control by doing targeted styling with breakpoints
 - f. No JavaScript allowed - only HTML and CSS
- 2) Use a mobile device emulator in your browser and/or resize your browser window as you go along to ensure that the webpage looks good on small devices and both in vertical and horizontal view.
- 3) Validate all files and correct errors before handing in.

Hand-in in one packed file (zip) on it's learning. Only one hand-in per group. Remember all group members name on the hand-in. Group name is the same as assignment 1.

Write whom (which pair) wrote which part of the code in HTML comments.

Have fun ☺
